

user account
 - save course
 - search course

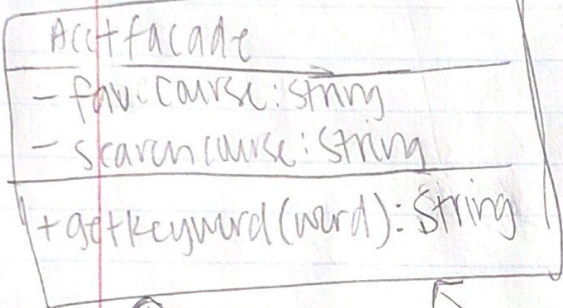

double check if it needs to be shaded in??

acct contains many clients while each client belongs to only one college

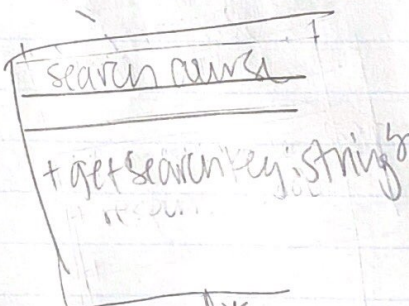

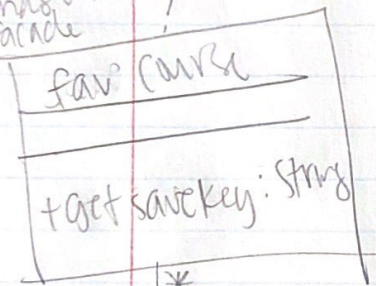

when searching a list of related/exact keywords show up and when you swipe you save that course into DB

in the save activity, there will be a list of saved courses user is interested, when click a pg/fragment will pop up with course content

* save class depends on acct facade

here could be multiple searches
